WARNING.....IF YOU HAVE A STAGNANT BRAIN AND DO NOT KNOW WHAT REAL INTELLIGENCE MEANS.....DO NOT READ THIS AS IT WILL GIVE YOU A HEADACHE.....

**R.E.F.I.Truth.**

**"REAL EARTH**

**FORTHRIGHT**

**INTELLIGENCE**

**Truth...".....A**

**BRIGHT MOVEMENT...**

TREES...The foundation of all life... .....The religion that matters.....THE LIFE LINE TO OUR FUTURE ON THE EARTH... HUMANS COMBINED WITH HUMAN IGNORANCE DEGRADING TREES AND ALL LIFE RAPIDLY.

Nothing on earth gives so much to life as does the humble tree and other green life including plankton. BUT TREES STAND WAY ABOVE ALL ELSE AS THE MAJOR CONTRIBUTOR TO THE HEALTH OF LIFE ON EARTH.

TREES are my religious temples of which I worship, offering more to ME than symbols, temples, ghosts, fantasy, deceit of OTHERS offered that have led us AND SURROUNDED ME ALL MY LIFE WITH war, destruction, hate .

I OFFER IN SIMPLE LANGUAGE, VERY SMALL IMPORTANT INFORMATION FACTS OF THE BENEFIT AND LIFE OF TREES TO COMMUNICATE WITH THE DUMB, APATHETIC, IGNORANT, ARROGANT, intelligent, NEGLECTED AND USELESS OF HUMAN LIFE. Often just deprived of honest information and reality.

"THE TREE LIST"..

- 1...Trees provide the bulk of fresh oxygen from land. Plankton in the sea provides up to 80% of all other fresh oxygen.
- 2..All are the only mechanisms that take in, absorb poisonous carbon gas released from coal, bushfires, burning off, vehicles, industry, overpopulations of hoofed and most other animals including ornamental dress up dolly dogs and cats for human crutch and profit. FARM ANIMALS IN GREEDY FALSE OVERPOPULATED NUMBERS PROVIDES UP TO 50% OF CARBON/METHANE IN THE ATMOSPHERE.
- 3...TREES ABSORB POISONOUS CARBON, METHANE , NITROUS OXIDE. Thus making living in a forest, the bush, highly evergreen treed urban space one of the healthiest places to live on earth. Google "Brian Carter pioneer urban forest". One of the worst unhealthiest places you can be in your own toxic home. . Several indoor green plants improve the freshness of some 16 cubic metres of air in your home.
- 4..Trees also trap numerous other air borne contaminants in their leaves including dust particles, other gasses. Some 40 tonnes of contaminants trapped in one mature large EVERGREEN tree every year.
- 5..Stores the carbon in the tree/plants/plankton and in the ground while tree is alive and dead..
- 6..If all the leaves of large mature oak, red gum are picked off and placed edge to edge on the ground it would cover 10 acres.
- 7...It takes a forest near an airport 24 hours to break down the toxic gasses from from one jet upon take off. When all airports in AMERICA WERE CLOSED FOLLOWING 9/11, for some 48 hours, smart Scientists measured the toxicity of the air around airports .The decrease of toxicity was incredible. St Barde Baker..."Men of the trees"... was ridiculed and scoffed when he offered this information 50 years ago.
- 8...When viewing a dead tree it appears generally empty of life. Spiders are the greatest indicator of a healthy life system. Often with a dew or frost the dead tree or grasslands and fences will light up with billions of small doylee type frosted spider webs ..Indicating all is well. Billions of spiders, trillions more spider prey living including pollinators.. and food for the next level of food chain.
- 9..Trees are the homes for millions of larger and smaller critical creatures including the pollinators mainly birds, bees, wasps, butterflies.
- 10..Evergreen trees offer fresh oxygen 12 months of the year, where as deciduous trees only offer fresh oxygen 6 months of the year and only absorb carbon for the same six months due to their dormancy. Not pulling/absorbing any carbon or contaminants in that dormant period.
- 11..We need billions more evergreen trees for fresh air, absorption of carbon and trapping contaminants to our benefit but also for soil nutrition and pollination. For every one tree that gives fruit or product we can eat or use, we require 5000 other trees generally or nearby to offer supplementary pollination support for all pollination requirements.. The wild bees of which there are many and imported bees and other insect pollinators including birds, need all pollen opportunities to remain in a productive location. Why do stone fruit and other fruit orchardists hire apiarists from 500 miles away to bring their bee hives to their orchards in flowering season? The

- diverse pollinating plants that would normally keep wild pollinators around, have been removed as rubbish or useless bush.
- 12...Criticism of parrots tip pruning all large gum trees on roadsides, forests, farm paddocks. This is nature's way of increasing pollination opportunity as from one tip prune by parrots produces 3 or more shoots on each tip, tripling blossom and pollination opportunity and food attraction for pollinators. Look now at the incredible large mass bloomings of gum blossom..Thank you parrots..Nature working with trees... humans not....Bees now threatened with extinction by us...
- 13..All the vegetation on the planet is what has given and is still giving us the soils of the planet with silt and sand, rock erosion from hills and mountains. It takes a million years to build up 100 mm of nutritious topsoil under/in a rain forest. Where rain forests are being bulldozed, plundered for palm oil and other greedy or desperate plunderers, the topsoil is usually washed /eroded away within 5 years. Sad isn't it.. Human ignorance.. In 100 mm deep by one metre square of mulch and soil in a forest there is at least 100 000 creatures such as worms, slaters, ants, millipedes and more, plus bacteria in the trillions breaking it down into soil . Australia's arid soils are 4 to 5 mm deep if that ...So we burn, graze millions of hoofed animals over very arid shallow top soil, forest, BUSH, rainforest land which rapidly erodes, blows away nutrition, water holding needs, WIPES OUT WILD SEED, compacts soils preventing regeneration, attracting ferals. Wiping out small ground cover plants and ground creatures in rapid time as is the current practise on QLD crown land. Some national parks NOW in QLD, burn EVERY TWO OR THREE YEARS for months at a time, to sprout young grass to fatten cattle on privileged govt land. After handing out privileged 99 year lease to privileged few many years ago... Dah "Dah"... Sir William Mac Donald received a knight hood by opening up the centre, by running thousands more sheep to the acre than the land could handle. Thus destroying millions of years old land, evolved with evolutionary balance and purpose.... Destroyed in virtually minutes in the big picture.. While the aboriginals would've looked on with dismay if they weren't shot , worked, kidnapped or raped in their precious adapted treed country. If you took a large gum tree, which if cut down, would cover a tennis court to a metre depth, when in time turned back to compost, then soil would be lucky to fill a child's small barrow.
- 14...Trees stabilize river banks and ocean shores. Though it took us white folk a while, we now know that you do not remove all the snags and fallen trees into the river as was early ignorant white settlement practise, as that is where the fish and all other river life thrive, breed, seek shelter and comfort.
- 15...We build our homes too big, with ever diminishing timber supplies of sustainable numbers and carbon and fresh air healthy ratio.
- 16...The shade provided by trees on farm and all other lands, for animals and birds, the pollinators who use spider webs to help hold their nests to the branches. Some 50% of bird kills including the pollinators are from storms from no stable protected, wind break tree cover that used to exist.....Farm animals on treeless paddocks in 40 degree heat..
- 17...Trees are what help controls our weather. Qld dumbo statement!!!!..."We must bulldoze and take over northern Qld lands for its high rainfall to grow crops and graze" ....Idiot, you remove rainforests and dense tree cover and rain fall erodes, decreases rapidly.. Carbon increases ..Barrier reef destroyed faster. Haven't you dumboes up there got any real perpetual all life saving, human stabilising ideas without letting out the real gold with the bathwater.!!Check your year 8 science and maths.
- 18..Trees also filter contaminants from rain water as well as the air, freshening soil annually with desirable nutrition. The mulch holding the moisture in the soil.
- 19...A full grown 100 year old plus river red gum would drink AROUND 5000 gallons of water a day keeping the water table down ..keeping salt levels deep, impeding salt water underground flows to prime fresh water, streams, rivers...Almost to late..
- 20.. The thousands of food and medicines from trees.

21...Food products harnessed for food for humans and TRILLIONS OF other major, minor life forms, Honey eaters, pollinators...Honey, lerps as food. Thousands of others. Only in a healthy "green" or "grey green" healthy balanced environment like patches of Australia...

22..The home for trillions of creatures connected to our very survival. But spurned by spoilt, ignorant, frightened, arrogant, impatient fluffy human race.

23...Wood art, craft and home building products but not at the cost of carbon release and desecration of wild habitat...hollows, nesting and resting cover for the wild.

24...Bless the trees, the rivers.....every week.. In 2007 I contacted Adelaide media and suggested people come to Swan Reach at a specific time and bless the river and the trees.....give thanks...though the rivers were in drought at that time. Other cultures bless their rivers daily , weekly.. We are to far up our own orifice to do such a thankful activity. We only exploit and fight each other for river rights for profit and self interest, while the river and the trees are working for all life.. It is interesting for at that time a friend did research into first Aboriginal contact and response to seasons. Always the response was ... "Long time wet, long time dry".

NOTE ...I COULD WRITE/OFFER HUNDREDS MORE BENEFITS OFFERED BY TREES /GREENERY.

....IS'NT IT INTERESTING, THE GREEN MOVEMENT CRITICISED HISTORICALLY, SHUNNED AND DESCRIBED AS CRACKPOTS AND YET IT IS THE GREEN OF AND PLANKTON/SEAGRASSES PLANTS THAT GIVE US THE AIR WE BREATHE AND TAKES IN OR TRAPS ALL THE TOXINS THAT WILL KILL US ALL. IF WE DO NOT PUT THE BRAKES ON THOSE POISONS FASTER THAN WE ARE DOING NOW AND PLANT BILLIONS MORE TREES TO SAVE THE HEALTH OF THE EARTH AND ALL LIFE WE WILL BE REMEMBERED OR LOST AS HIGH, SELF DESTRUCTIVE KAMAKAZI LEVEL MORONS....

Look at the trees NOW, knowing the trees or greens are giving you life and keeping us alive/healthy every day.....and front line against carbon, methane and other toxic air and land contaminant, poisoning us all rapidly. Nearly two in 4 people on the planet have respiratory/breathing problems!.

Numb skulls could be and will be described as murderers BY FUTURE SUFFOCATING, CHOKING, STARVING SHORT TERM GENERATIONS. Just keep bulldozing, burning forests, DIGGING UP COAL for cheap short term profit...long term stupidity.... AMEN

Brian A Carter
